

Title: REASONS WHY THINGS ARE SEEN (7 S'S AND M)

National Cadet Corps (NCC) â Official Directorate General Training Notes

1. THE SEVEN S's AND MOVEMENT DOCTRINE: Human eyes detect objects against natural backgrounds due to eight visual contrast factors: Shape, Shadow, Shine, Surface, Spacing, Silhouette, Sound/Smoke, and Movement.

2. ANALYSIS OF INDIVIDUAL FACTORS: Shape: Unnatural geometric outlines of helmets, weapons, and square backpacks contrast against foliage. Shadow: Troops standing in bright sunlight cast distinct shadows. Shine: Reflection of sunlight on watch glasses, belt buckles, or polished rifle barrels. Surface: Smooth skin or synthetic cloth texture contrasting with rough forest bark.

3. SPACING, SILHOUETTE, AND SOUND: Spacing: Regular geometric spacing of trenches or troops. Silhouette: Exposing outlines against the open skyline or pale walls. Sound & Smoke: Cooking smoke or metallic rifle clicks.

4. MOVEMENT AS THE PRIME GIVEAWAY: Movement is the single most rapid trigger for human peripheral vision. An immobilized camouflaged soldier remains invisible, but a sudden hand gesture immediately betrays the position.
