

Title: PREVENTABLE DISEASES AND VECTOR CONTROL

National Cadet Corps (NCC) â Official Directorate General Training Notes

1. CLASSIFICATION OF INFECTIOUS FIELD DISEASES: Military infectious diseases are grouped by transmission mechanism: Water-borne (Cholera, Typhoid, Bacillary Dysentery), Air-borne/Droplet (Tuberculosis, Influenza, Measles), and Vector-borne (Malaria transmitted via female Anopheles mosquitoes, Dengue and Chikungunya via Aedes mosquitoes).
2. IMMUNIZATION & VACCINATION PROTOCOLS: Every NCC cadet must be fully immunized against Tetanus, Typhoid (TAB vaccine), Hepatitis B, and COVID-19 prior to attending regional or national camps (RDC/TSC/YEP).
3. VECTOR CONTROL & PROPHYLAXIS: In endemic terrain, personnel must sleep under permethrin-treated mosquito nets, apply DEET insect repellents during evening roll call, take prescribed anti-malarial prophylactic tablets, and eliminate stagnant water within 500 meters of the camp perimeter.
